Name of Utility Company: Avista

Comment: I object to HydroOne acquiring Avista. I can't believe I even have to write this letter, because what the heck is a company from a totally different country doing attempting to buy a utility company of another country, and in this case specifically one of our utility companies in the United States. And why are the, powers that be at Avista even considering selling to another country? I do not think it's a good move, considering where it could lead in the long run, like hiking up all our rates super high and a move that could also help lead us closer towards the giving away of US sovereignty.

Subject: Avista Sale to Canada

CASE NUMBER: AVU-E-17-09 and AVU-G-17-05

Who gave Avista the option to sell America's energy company to Canada's HydroOne and why? Canada can later sell HydroOne to China or any country, due to international trade agreements. Then what?

It's critically important as American national security concerns that we disallow any foreign-owned corporation to own/control our energy companies, dams, electrical and natural gas infrastructure.

Being a member of the UN's Paris Accord on climate change, Canada's HydroOne can and will charge American ratepayers exorbitant prices for their green-mandated energy laws.

HydroOne is switching to unreliable and unaffordably expensive windmills and solar, both requiring labor-intensive maintenance for correct operation. Solar panels require weekly cleaning and regular batteries' replacement. Consequently, America's reliable hydroelectric-generating dams will deteriorate, ending our affordable energy.

Despite being told this sale is going through, the Idaho Public Utilities Commission can stop this imminent sale. We citizens can stop this sale if we will only do.

Name of Utility Company: Avista

Comment: I am greatly concerned about the upcoming merger of Avista and Hydro One. Hydro One was the most expensive electric utility in North America in 2015 charging 29.9 kwhr! They had a rate hike of 25% alone in 2016! Many customers in Ontario can not afford Hydro One's rates, with 58,000 households being disconnected. Hydro One's transmission system is deemed the least reliable of all of Canada's distribution companies. They do not have a stellar record of treating their customers fairly.

why should we give control of our dams, our electric generating facilities, and our distribution system to a foreign owned company?

This is a National Security issue.

And what is preventing Hydro One from selling out to a Russian or Chinese company? Russia already owns 20% of our uranium resources thanks to Hillary Clinton. Lets keep our precious natural resources in US hands, and not sell them off to the highest bidder!

Sincerely,
Mark Fisher
